Armored

Armored Low Loss Cables

From double jacketing to the highest level of protection (ProJack), the armored SHF range will resist high mechanical stress while providing first class electrical performance. Today, armored SHF cable assemblies are used on the heaviest defense and industrial environments where durability and reliability are essential. The Projack shielding protects SHF Ultra Low Loss cables and fully resists to crush, abrasion, and traction. Radiall's Projack also prevents from the kink effect and provides watertightness.

In many customer applications, mechanical stress may damage the cable assemblies and then decrease performance or make the system fail. Radiall has designed several levels of armored structures embedding SHF core lines.
